

## Who is ON-THE-GATE ?

On The Gate, LLC is a company dedicated to advancing new technology in the field of penology.

Our Executive Staff have routinely handled violent and disruptive prisoners for more than 30 years and are experts in the field of penology security and safety.

We are acutely aware of the problems caused by violent and unruly inmates in today's prisons, institutions and jails. Our team's experience has been gained through "on-the job" real life working conditions found in the everyday operations of jails and prisons.

Several Company team members and advisors are retired from the corrections, jail and prison industry. Having held such positions as "Chief of N.Y.C. Corrections" (Ret.), and "Warden I (Ret.) Riker's Island, N.Y.C.", our team's vast knowledge and insight in the daily operations of the jail and prison industry has led to the development of the innovative **Patented Anti-Splash System**.

The **Patented Anti-Splash System** was designed to increase the safety and security of personnel while reducing the budget expenditures of prisons, jails, detention centers and other secured institutions.

Development of the **Patented Anti-Splash System** (PASS) evolved to eliminate personnel's direct contact with the violent and unruly inmate population found in segregation units.

The **Patented Anti-Splash System** incorporates a high security locking system, and a "Hands Free" power assisted door that opens and closes vertically.

We stand behind the quality of our products with a 10 year manufacturers defect warranty and our unlimited 24 hour technical support and customer service.

All our products are **Proudly Made In The USA**. We're proud to support the workers of America.

**In Hundreds of Jails, Prisons and Detention Centers Throughout The United States The PATENTED ANTI-SPLASH SYSTEM Has PROVEN to Greatly Increase**

**THIS WILL HELP  
STOP THE VIRUS  
FROM SPREADING**

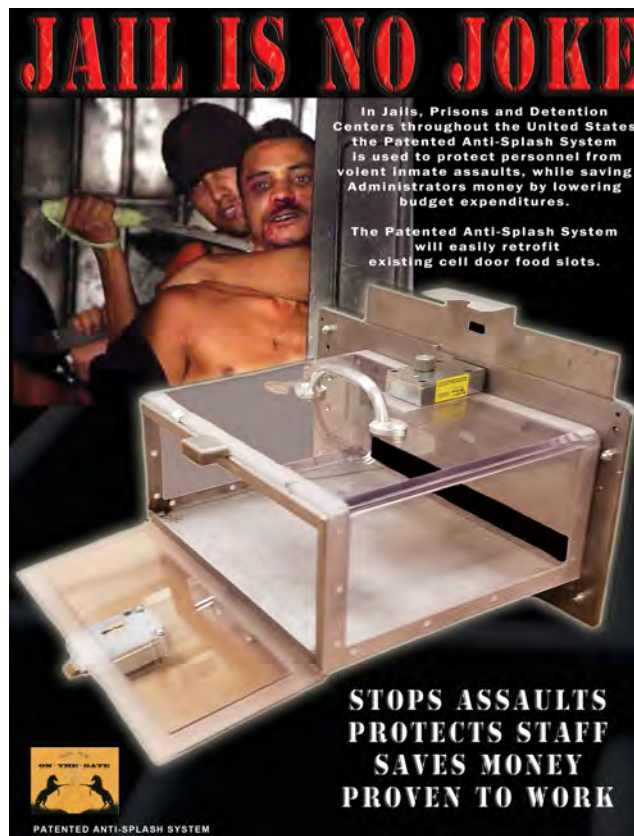

**Patented Anti-Splash System**

The “Patented High Security Anti-Splash System“ is highly effective in stopping the transmission of the Corona Virus (COVID-19) by isolating Staff from direct contact with inmates /prisoners; be it physical contact or aerosol droplet contamination.

The close population quarters inherent in your Jail / Prison system presents a clear and ongoing high risk of infection to our Correctional Staff and the prisoner population. Correction personnel and prisoners are at especially high risk of infection due to the close confinement in your Jail /Prison system that are nothing short of a giant petri dish environment.

Time is extremely critical regarding this sinister outbreak of the coronavirus, and the final outcome is still unknown. By employing the “Patented High Security Anti-Splash System” in your Jail / Prison system to protect our Correction Staff and prisoner population from the infestation of the coronavirus (and other infectious diseases), is a positive action you can take to defeat this insidious plague in your Jails and Prisons.

The Patented Anti-Splash System can be used in jails, prisons and other security-based institutions to allow for safe cuffing of violent and unruly inmates with minimum staff contact.

It also aids in stopping the spread of the Corona Virus and other infectious diseases by limiting physical contact between Staff and inmates along with stopping viral spreading aerosol droplets from contaminating surrounding areas.

Installation is quick and simple by retrofitting existing cell door food slots. In most cases installation can be done in less than 60 minutes using a Drill, Tap, and Screwdriver.

## **Saving Money While Keeping Our Personnel Safe!**

Every administrator has budget concerns; That’s why you’ll be glad to know that the Patented Anti-Splash System helps pay for itself. It’s a known fact to Administrators that assaults to Staff not only cause injuries to Staff and inmates, but also costs money - Lots of money! Many times running well into the Six Figure range. It’s also a fact that it’s not if an assault will happen ... it’s *WHEN* the assault will happen! When an officer is assaulted through a standard cell door food slot, not only does it result in potential serious injury to both Staff and inmate, but it can be a major financial outlay for the Facility and Municipalities involved. By replacing an antiquated cell door food slot with a Patented High Security Anti-Splash System, Administrators will see money savings through:

- 1. Reduced cost in overtime to replace injured Staff.**
- 2. Reduced cost for medical treatment for both Staff and inmates.**
- 3. Reduced cost in defending frivolous lawsuits initiated by inmates claiming injuries, rights violations against Staff, Administrators and Municipalities.**
- 4. Reduced cost in expensive investigations of assault incidents.**

*By replacing a standard cell door food slot with the Patented High Security Anti-Splash System, assaults to personnel are virtually eliminated. That’s a Win-Win situation for both Administrators and Personnel.*
